

Danalock V3

The Danalock V3 is a wireless Bluetooth® smart lock that lets you easily control access to your home with your smartphone. The perfect solution for your home automation system. With its simple Danish design and advanced encryption algorithm, the Danalock V3 offers a secure and elegant door locking experience.

Beautiful Danish design

Anodized aluminum ensures not only a scratch-free surface but also a unique finish. The small form factor provides a sleek, futuristic look.

Strong security

Danalock V3 uses an advanced encryption method for transferring data (AES 256), which is the same encryption technology used by governments to keep information secure.

Easy installation

No special tools are required, as everything on the outside of the door stays as is, while you only mount the Danalock V3 on the inside of the door. It can be installed in 5-10 min.

Flexible access control

Set up the Danalock V3 to unlock the door upon arrival and re-lock the door after entering. Connect it to your smart home gateway or the Danabridge V3 (sold separately) to lock, unlock and monitor the Danalock V3 from anywhere.

Grant access to your home

Create an unlimited number of digital keys for your family members and friends. Program each user's access level by choosing permanent or temporary access.
